Piper Offline Empathetic Assistant

Overview:

- This project aims to develop an offline AI companion for the Sundae Doll that can interact with users in a natural, empathetic, and conversational manner without requiring an internet connection.
- The goal is to enable the doll to understand user inputs, generate emotionally supportive responses using a local Large Language Model (LLM), and communicate them through a local Text-to-Speech (TTS) system.
- The project also focuses on evaluating different local LLMs, improving voice quality, and integrating speech input and audio playback to create a more natural and engaging offline companion experience.

Conclusion:

- Llama 3.2:3B showed the best overall performance among the four local LLMs.
- It consistently generated warm, natural, and emotionally supportive responses.
- Its response length was balanced and well suited for offline Text-to-Speech (TTS).

Note:

- Now, I'll show the experimental results that support this conclusion. The next slides contain the conversation testing, observation records, and comparison tables used to evaluate the four local LLMs.

Testing Local LLM's Across Different Conversation Scenarios
